-!- FUNCTION: F-ACTIN-BINDING PROTEIN WHICH MAY PLAY A ROI
LINKING ACTIN TO OTHER CYTOSKELETAL PROTEINS. ALSO BIN
MICROTUBULES (BY SIMILARITY).

-!- SUBCELLULAR LOCATION: CYTOPLASMIC.

-!- SUBCELLULAR LOCATION: CYTOPLASMIC.

-!- SIMILARITY: CONTAINS 1 ACTIN-BINDING DOMAIN.

-!- SIMILARITY: CONTAINS 2 CALPONIN-HOMOLOGY (CH) DOMAINS.

Microbiol. 4:895-904(1990).
FUNCTION: AGGREGATION SUBSTANCE ALLOWS DONOR AND RECIPIENT STITUTED FORM TIGHT AGGREGATES WHICH ALLOW THE NON-MOTILE BACTERIA MAINTAIN PHYSICAL CONTACT OVER A PERIOD OF TIME SUFFICIENT TO PERMIT CONJUGATIVE TRANSFER OF THE SEX PHEROMONE PLASMID FROM DONOR TO RECIPIENT STRAINS.
SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan an amide bond (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        European
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SWISS-PROT entry is copyright. -i-FUNCTION: MAY AID IN THE PASSAGE OF THE NASCENT POLYPEPTIDE CHAIN THROUGH THE RIBOSOME CHANNEL INTO THE CYTOSOL. SUCH AN INTERACTION COULD BE CRUCIAL FOR CONTINUOUS TRANSPORT OF THE POLYPEPTIDE;

COULD SERVE TO PREVENT THE NASCENT POLYPEPTIDE FROM INTERFERING WITH TRANSLATION BY CLOGGING THE RIBOSOME CHANNEL (BY SIMILARITY).

-i-SUBCELLULAR LOCATION: CYTOPLASMIC. ASSOCIATED WITH TRANSLATING RIBOSOMES; MAY BIND DIRECTLY TO THE NASCENT POLYPEPTIDE.

-i-SUBLIBLIULAR LOCATION: CYTOPLASMIC. ASSOCIATED WITH TRANSLATING RIBOSOMES; MAY BIND DIRECTLY TO THE NASCENT POLYPEPTIDE.
